

Microsoft Teams for remote workers

Microsoft Teams solves communication and collaboration problems with one integrated solution. Its complementary tools help employees work together in an intuitive and collaborative environment, across devices and from any location.

KEY FEATURES

Team collaboration

Remote workers can benefit from threaded, persistent chat to always stay in touch with their colleagues. Conversations, files, and tools can all be accessed live in a team workspace. Teams integrates seamlessly with the rest of the Microsoft 365 suite, so access to tools like SharePoint, OneDrive, OneNote, Power BI, and Planner is easy. You can co-author and edit with Office and other files right in the app, and build tailored channels based on topics, work streams, or business function.

Messaging and calendaring

Stay organised and productive with Teams. Prioritise important messages automatically and share meeting availability internally and externally. It's easy to schedule conference calls and video meetings at the click of a mouse and you can reserve conference rooms in your physical office easily. It's the perfect solution for hybrid working.

Content sharing

Share files with others inside and outside the organisation and even stay connected with files and folders when offline. If you think you've lost a file, fear not: you can easily recover previous versions and track changes to files and documents. You can also easily modernise email attachments with link to file and automatic permissions.

Enterprise security and compliance

Teams enjoys broad compliance standards support and supports multi-factor authentication for advanced-level security. Teams also offers information protection with Archive eDiscovery, Legal Hold, Compliance Content Search, Auditing and Reporting. Your data is encrypted at all times at-rest and in-transit.

KEY BENEFITS

Chat, calls and meetings for modern teams

Communicate in the moment and keep everyone in the know using chat, calls, meetings both within your team and across organisational boundaries. Easily join Teams meetings with HD video, VoIP, and dial-in audio conferencing options and have a dedicated phone number. Teams is available across mobile, desktop and browser; integrated with meeting room devices.

Integrated Microsoft 365 apps

Give your team quick access to information they need right in Microsoft 365. Conversations, files and tools can be used and shared live in a team workspace and you can work on documents and files together in the app; no need to switch views. Teams is fully integrated with SharePoint, OneNote, Power BI and Planner and other 365 tools.

Customisable and extensible

Tailor your workspace to integrate cloud apps and services that suit and support your team and organisation. Add bots that work on a team's behalf; you can get more done with less man power. And, using the Teams developer platform, you can build integrations into existing business processes.
